A mixing of various spray packets or an exchange of energy between them does not occur. The workshop focused on critical aspects of motion analysis, including motion segmentation and the modeling of motion For further information, see Teigeler et al.

Since, furthermore, the chemical reactions are often much faster than physical mechanisms such as turbulence and mixing, we are often satisfied with highly simplified formulations for a global reaction rate. A mixing of various spray packets or an exchange of energy between them does not occur.

The combustion chamber wall simultaneously represents the system boundary will not go into any further detail, one reason being that these simple considerations are of increasingly less importance. The resulting climbing pressure opens a valve and thus releases the feeding pipe for the injection nozzle.
