However, this phenomenon is quite commonly seen in the much more mundane circumstances of trauma. Patients often present with bone pain, occasionally accompanied by a soft-tissue mass or swelling.

Radiographer reporting in mammography, ultrasound, CT and other specialis A-Z of emergency radiology. Many radiographer practitioners are now continuing to expand their reporting skills from the appendicular skeleton to include the axial skeleton in trauma. Other allied profession may also be reviewing axial skeleton trauma radiographs, for instance nurse practitioners such as in cases of hip trauma.

The first chapter discusses mechanisms of injury of major trauma and is written these cases, the course is also self-limited, with full recovery evident in 3 – 12 months.
